How much truth there may be in the below statement, we do not know. It sounds like a "fake," but it is easy to try in growing seasons. The story

is taken from an exchange: "The shrewd melon growers have a closely guarded secret for fattening their melons. When they see an exceptionally symmetrical melon of good proportions they resort to a scheme of their own for increasing its

corpulency. "They procure a good size bottle, usually an old quinine bottle, and fill it with sugar-sweetened water, and, taking a darning needly threaded with a cotton string, they pierce the stem of the melon, pull the end of the string to the middle of the aperture, put the other end through a cork, thence to the sweetened water, after having removed the needle, and then leave the melon to do the rest.
